Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of eleven two-story, two-bay wide vernacular Renaissance Revival-style brick houses with shed roofs and sheet metal cornices were built in 1904 by Walter Westphal, a major builder of working class houses in East Baltimore. The houses were originally painted a dark red, with the basement area painted white to imitate the marble basements of more expensive houses. Now, most of the houses are covered with formstone.

After the use of wood was outlawed for cornices in 1892, sheet metal became the predominant material used. By the early years of the 20th century, the most popular form of sheet metal cornice sported ball finials and often classical motifs like swags pressed into the frieze area. Generally, only main street two story houses had decorated friezes—the builder saved money on his small street versions by eliminating them. Likewise, while the main street houses in this style would have marble basements, stringers, lintels, and steps, builders used no marble at all on their small street versions, painting the basements white instead. Main street houses would have stained glass transoms over both the door and the wide first floor window; on the small streets builders offered stained glass only in the door transom.

The houses are two stories in height, 12' wide and occupy lots 66' deep. Each house is two rooms deep and there is no backbuilding. The houses are constructed in running bond and have been painted. The basement area was painted white to imitate marble. Each house has a single hooded chimney located near the rear of the house. The shed roof is capped by a sheet metal cornice consisting of a crown molding set above a row of dentils, a deep cove molding, and two lower molding strips, a row of quarter-rounds, and a row of scallops. The two end brackets have ball finials that rise well above the roof line and are decorated with acanthus leaves.

The door and window openings have segmentally arched brick lintels, with plain tympanums. The sills are wood. As is common in houses of this period, the first floor window is wider than those above. All windows are filled with 1/1 sash. Doorways had stained-glass transoms but not all remain. No original doors remain. The houses sit on fairly low basements lit by a single-light sash, set beneath a double-header segmental arch. Each front door is reached by three concrete or brick steps.

929 North Bradford St. retains its original first floor storefront, decorated with stained glass.

Specific dates 1904

Builder/Architect Walter Westphal

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses is significant as representing the very last type of small street houses to be built, in the period c. 1905 – 1909, when a new city ordinance outlawed building houses on streets less than 40' wide. The houses were built by Walter Westphal, a major local builder, according to a pattern that was quite common to the city's working class neighborhoods of the period c. 1880 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of two-story house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 - \$1,500; small street houses for \$700 - \$900.

Westphal sold the houses he built on both side of this block of Bradford St. to Bohemian owner-occupants who received their mortgages from the variety of Bohemian community-based building and loans. He also built identical houses along the west side of the street.
